4. Conclusion 9

1. Executive Insights: 2025 Strategic Performance Review

- Scope: YTD Financial Analysis (Jan-Sep 2025)
- Objective: High-level performance tracking against targets and YoY growth trends for C-suite decision-making.

1.1. Financial Health & KPIs

Figure 1. 2025 YTD Revenue vs. Target

As of September 2025, the company has achieved a Total Turnover of €12M, reaching 59% of the annual target.

Target Variance: While the €12M baseline is strong, the achievement rate suggests a need for accelerated growth in Q4 to meet the full-year objective.

1.2. Monthly Trends

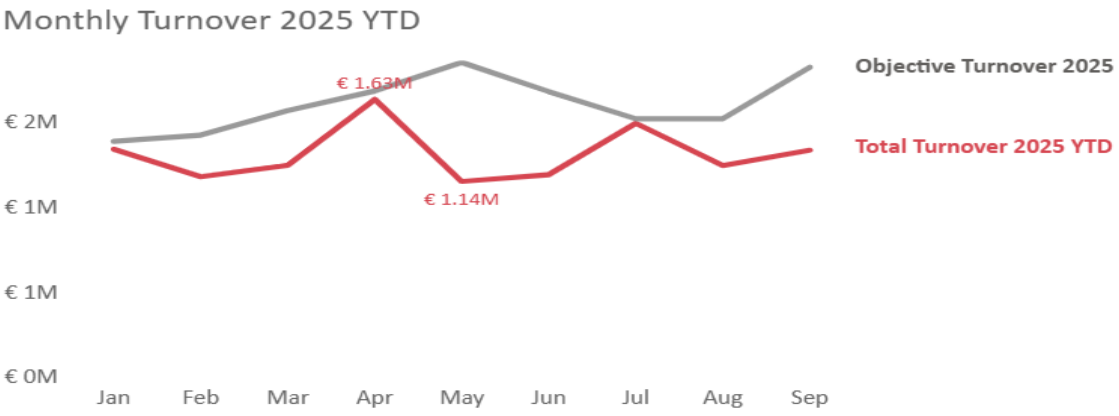

Figure 2. Monthly Sales vs. Targets

The line chart compares actual monthly turnover with objectives:

- Peak Performance: April recorded the highest turnover at €1.63M, closely tracking the objective.
- Correction Phase: May saw a significant dip to €1.14M, the year's lowest point. This was largely a reaction to high purchasing volume in the prior month and a

misalignment with aggressive monthly targets. This trend is also illustrated in Figure 3 below.

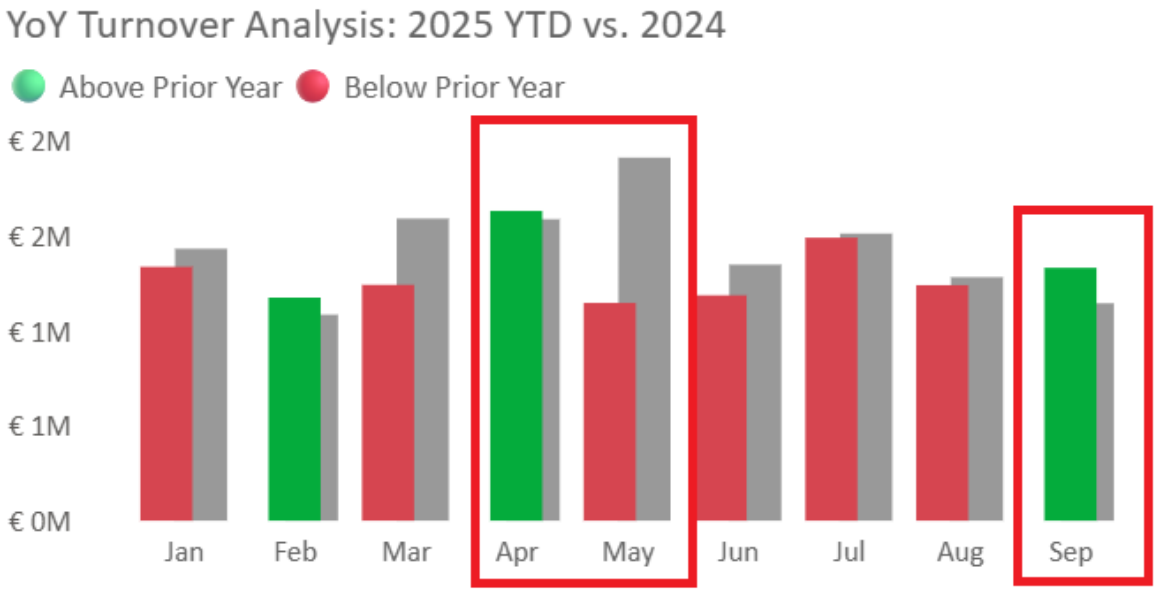

Figure 3. This Year vs. Last Year (YoY)

Figure 3 illustrates the YoY growth, showing that 2025 performance has surpassed 2024 in only three out of the first nine months. Notably, there is a significant dip between April and May, while May last year recorded a particularly strong performance.

However, September shows a positive outcome after a prolonged period of lower performance, suggesting that the recent approach is starting to deliver encouraging results.

1.3. Regional Productivity & Managerial Impact

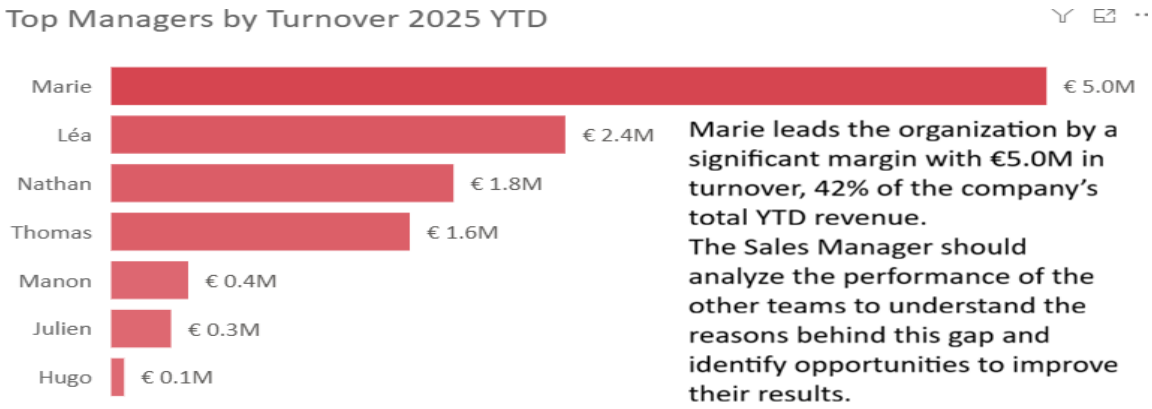

Figure 4. Top Performers: Turnover by Manager YTD

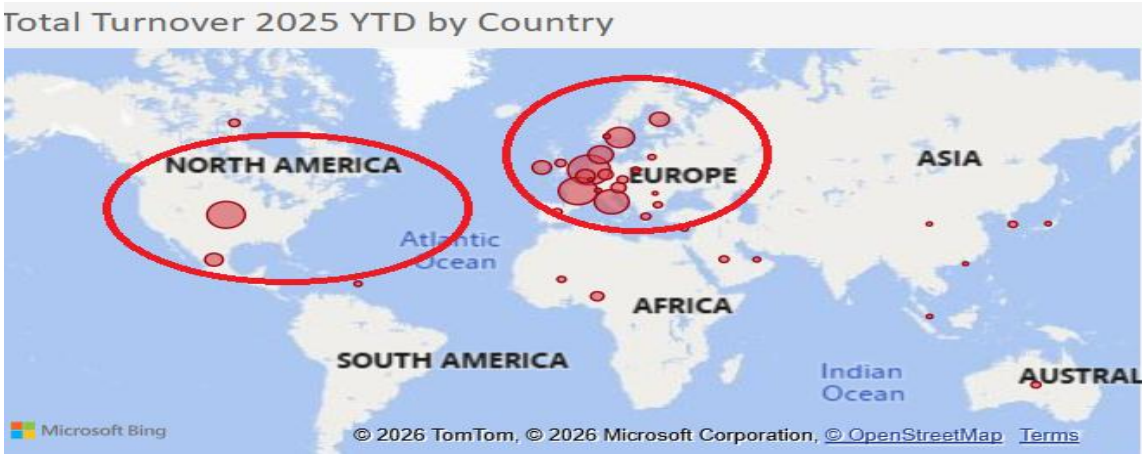

Figure 5. Regional Market Performance & Penetration

Figure 5 highlights market concentration: the heatmap confirms that Northern and Western Europe, along with North America, remain the primary revenue engines. Current data also indicates untapped potential in Asian and Southern Hemisphere markets, which currently generate negligible turnover.

1.4. Recommendations

Revenue Concentration & Risk Mitigation

Our current performance is heavily reliant on specific high-performing segments. Notably, Marie accounts for a significant percentage of total YTD turnover, driven by her success in the North/West Europe and US markets. While this demonstrates strong leadership in core regions, it also highlights a "key-person" and "key-market" risk. To ensure long-term stability, our Q4 strategy must focus on empowering other managers and diversifying our revenue streams across emerging territories.

Tariffs: The "April 2025" Impact

- The dip in performance observed from April 2025 onwards correlates with the implementation of new US trade tariffs (Executive Order 14257). These policy changes created immediate pressure on our US operations and shifted global customer behavior.
- The Challenge: Increased costs and customs complexity have made prospects more hesitant.
- The Response: We are developing specialized Tariff-Mitigation Offers, including landed-cost guarantees and streamlined customs support, to restore client confidence.

Q4 2025 Vision & Action

Our roadmap for the Q4 rests on three points:

- Market expansion: Aggressively targeting non-US/EU regions to offset tariff-related volatility. A key focus will be leveraging Free Trade Agreements (FTAs) in emerging markets to reduce overhead and create new, high-margin revenue streams.
- Strategic value-add: Using our "Tariff & Guarantee" packages as a competitive advantage to win new prospects.
- Client Loyalty & Stability: We are doubling down on our core client base to ensure they remain insulated from market fluctuations. Our retention strategy includes:

- Service excellence: Maintaining high-touch support to build long-term trust (sales team).
- Digital optimization: Updating the web platform for better transparency and user experience (IT team).
- Market-competitive pricing: Keeping our rates aggressive to match global shifts (sourcing team).
- Logistics improvement: Improving the supply chain to bypass delays (logistics team).

2. Sales Manager Insights

- Scope: sale performance 2025 YTD
- Objectives: for the sales teams to review and take the decision by the sales manager

2.1. Revenue Forecast And Q4 Target Gap

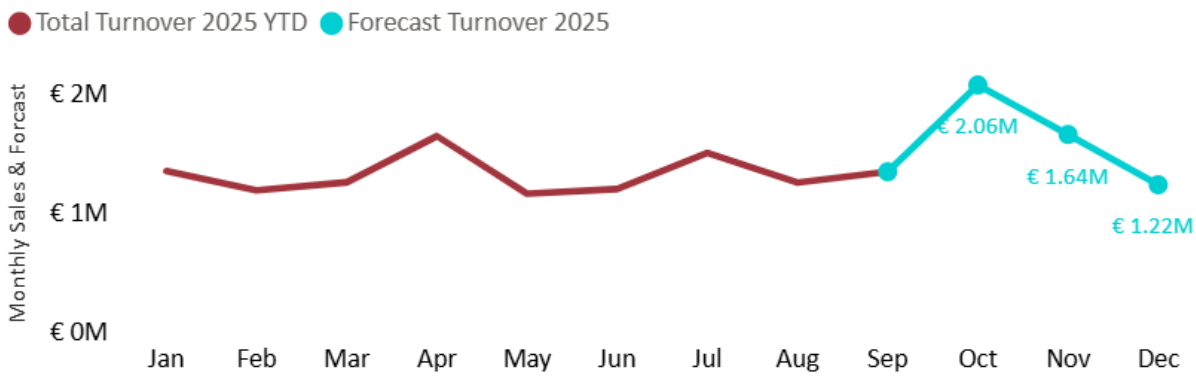

Figure 6. Monthly Turnover Trends & Q4 Growth Forecast

According to the €8M gap remaining for Q4, Figure 6 highlights the shortfall needed to reach our €20M annual target. Based on purchasing trends observed in Q4 2024, we have established monthly targets of €2.06M for October, €1.64M for November, and €1.22M for December.

2.2. Key Account Concentration

Client Name	Total Turnover	% Client Contribution	Client Country Code	Manager Name
The Sophisticated Second	€ 924,112	7.87%	SE	Marie
The Suede Story	€ 716,940	6.10%	FR	Léa
Mémoire de Mode	€ 488,950	4.16%	NL	Marie
La Robe Réincarnée	€ 356,364	3.03%	NL	Marie
The Gentry's Trove	€ 314,379	2.68%	BE	Léa
Il Secondo Atto	€ 300,251	2.56%	MX	Julien
The Frontier Find	€ 291,519	2.48%	DK	Marie
The Refined Resale	€ 256,464	2.18%	NL	Marie
The Adored Archive	€ 188,936	1.61%	FI	Marie
The Adventurer's Archive	€ 172,551	1.47%	NL	Marie
Total	**€ 4,010,466**	**34.14%**		

Figure 7. Top 10 Clients by Revenue Contribution

The "Top 10 Clients" analysis shows that a small group of accounts contributes over 34% of the company's total revenue, with a strong concentration in the Netherlands (NL). To mitigate the risk of over-dependency on a limited number of major clients, specific actions will be outlined in the recommendations section.

2.3. KAM Performance & Target Alignment

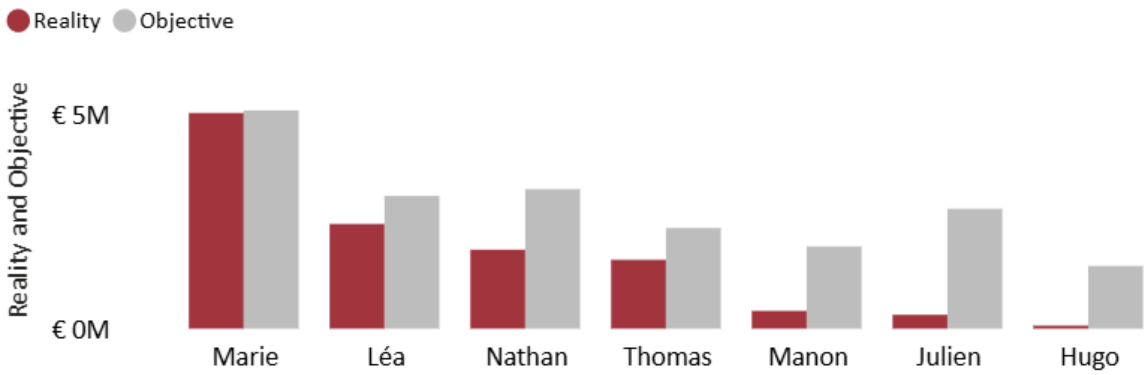

Figure 8. KAM Performance: Reality vs. Objective YTD

Marie has demonstrated exceptional performance, nearly reaching her individual annual target ahead of schedule. However, a significant variance exists across other teams. We will initiate 1-on-1 strategy sessions with each manager to identify specific roadblocks and bridge the gap between current reality and year-end targets.

2.4. Geographic Contribution by Sub-Region

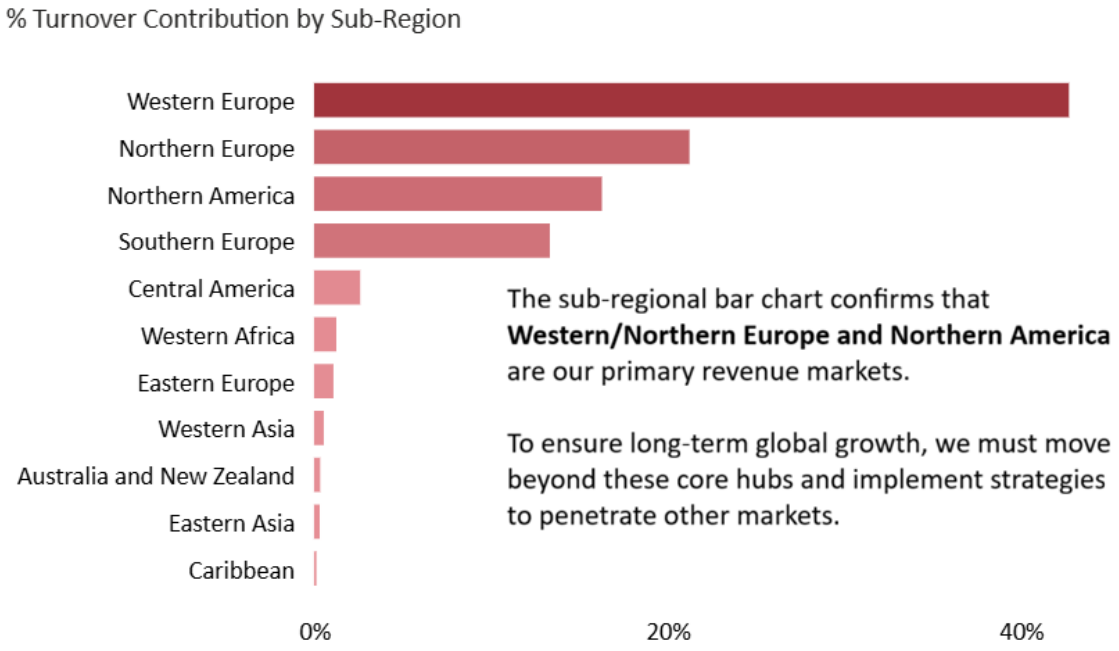

Figure 9. Regional Revenue Mix: % Turnover by Sub-Region

2.5. Product Category Analysis

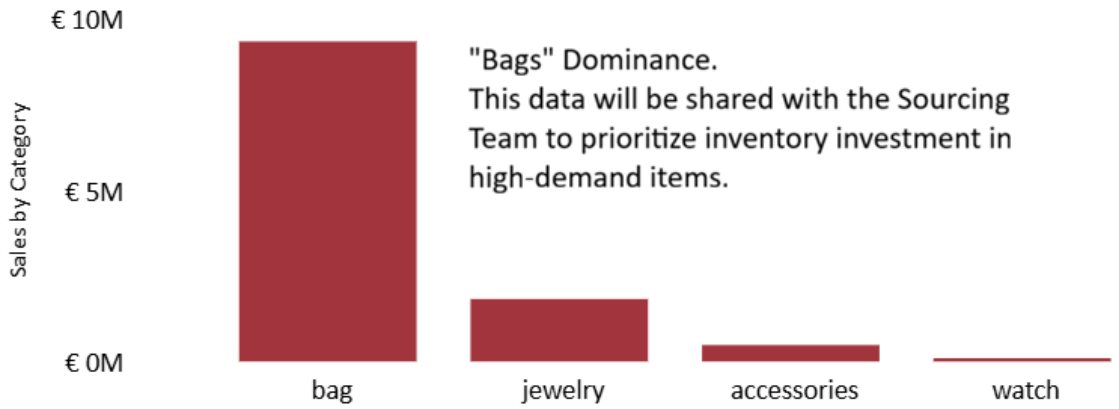

Figure 10. Product Performance: Sales by Category YTD

2.6. Recommendations For Q4 2025

- Target Recalibration: Finalize and distribute clear monthly quotas for the sales team to systematically close the €8M gap.
- Market Diversification: Launch a targeted client acquisition campaign in non-EU and non-US regions to better balance our geographic revenue distribution.
- Collaboration with other teams: Strengthen collaboration with the Sourcing and IT teams to ensure our highest-converting category (Bags) is prominently featured on the website, optimizing the user journey and maximizing end-of-year turnover.

3. Sourcing And Logistics Manager

- Scope: Sourcing and logistics 2025 YTD performance
- Objective: Provide sourcing and logistics managers with clear insights into operational performance.

3.1. Key KPIs

Total Items Sold	Avg Purchase Price	Margin Rate %	Total Loss	Loss Rate %
17K	€ 600	15%	€ 24K	0.20%

Figure 11. 2025 YTD Operational KPIs

Performance remains strong with 17k items sold at a high-value average of €600 per unit. While the 0.20% Loss Rate is within a healthy threshold, the total value of €24k in losses represents an opportunity for bottom-line improvement. Maintaining a 15% Margin Rate requires a focus on both high-performing suppliers and tightening logistics controls.

3.2. Supplier And Sourcing Strategy

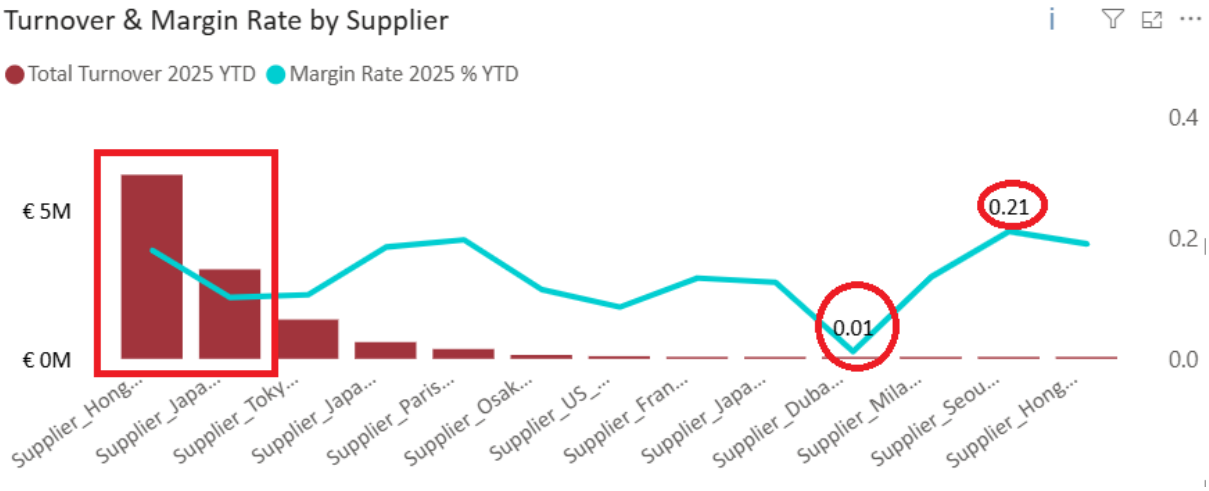

Figure 12. Supplier Analysis: Turnover vs. Margin Rate

Two suppliers from Hong Kong and Japan play a significant role in the company's turnover. In addition, the margin rates vary significantly, with the highest at 21% and the lowest at 1%. Therefore, we should continue prioritizing sourcing from the Hong Kong and Japan suppliers while avoiding the Dubai supplier, which generates almost no margin.

3.3. Product Category Analysis

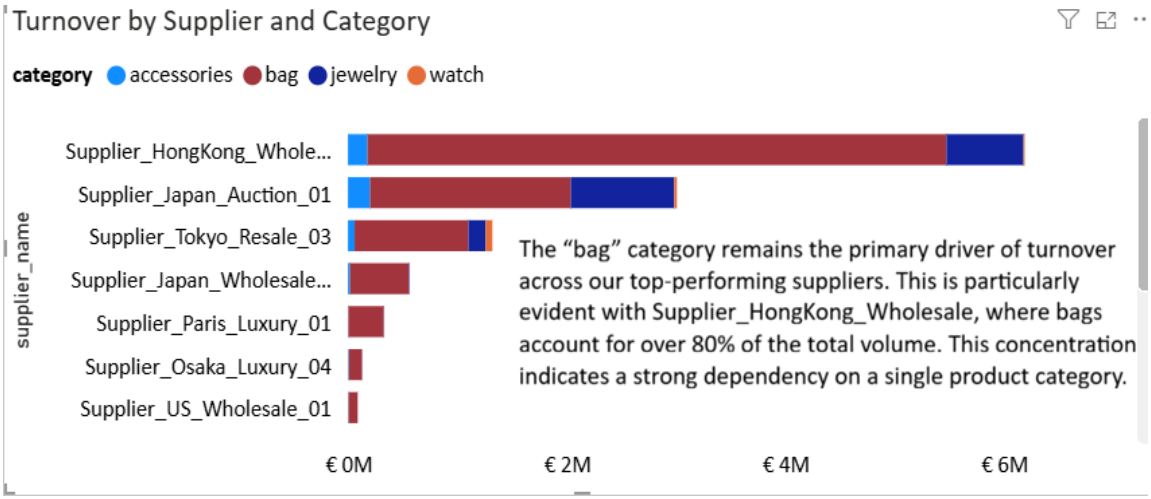

Figure 13. Supplier Revenue Breakdown by Product Category

3.4. Loss Analysis

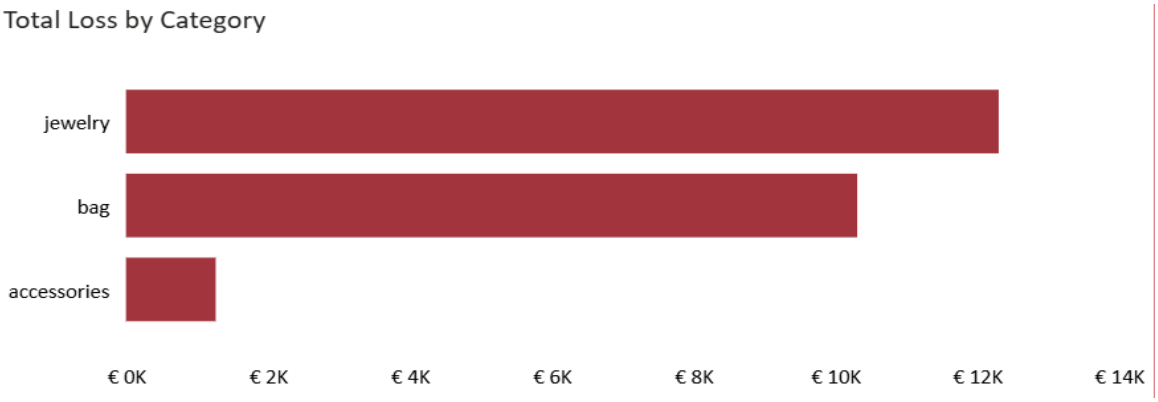

Figure 14. Inventory Loss Analysis by Product Category

Loss Reason	Total Loss
Inventory mismatch	€ 12,190
Inventory mismatch	€ 9,574
Inventory mismatch	€ 695
Inventory mismatch	€ 687
Inventory mismatch	€ 427
Client refused delivery	€ 142
Theft during transit	€ 119
Damaged during transport	€ 20
Lost by logistics partner	€ 16
Total	**€ 23,880**

Figure 15. Detailed Loss Analysis

- Jewelry Risk Profile: Despite being a high-value category, jewelry accounts for the largest portion of total loss (~€12k). As these are small, high-value items, they are prone to "Inventory Mismatch", our leading loss reason.
- Logistics Bottlenecks: The data shows that "Inventory Mismatches" is the primary drivers of loss. This suggests a need for better scanning technology or specialized high-security packaging for jewelry.

3.5. Recommendations

- Sourcing Optimization: Prioritize SKU expansion in the Bag category, as it demonstrates the best balance between high average purchase price and logistical stability.
- Packaging Protocol: Implement tamper-evident, dedicated small-item packaging for all jewelry shipments to reduce mismatches and potential theft during transit.
- Process Audit: Conduct a review of current warehouse check-in/check-out procedures. As inventory mismatch is the primary cause of losses, implementing a more rigorous double-blind counting system could significantly reduce discrepancies.
- Project 2 Integration: More detailed logistics workflow optimizations aimed at reducing losses will be formally addressed in Project 2.

4. Conclusion

This report provides actionable insights for three core organizational levels: Executive Leadership, Sales Management, and Sourcing & Logistics. By bridging the gap between raw data and strategic decision-making, these dashboards empower the team to optimize margins and mitigate operational risks. For a technical deep-dive into the architecture, including data models and custom DAX formulas, please refer to the interactive Power BI link provided.

Below is an overview of the three dashboards:
